Professional Project Details (Capgemini)

Project name	RFM2 Automation
Tools/Technologies Used	Java/J2EE, Selenium Webdriver, Selenium Grid, TestNG, JavaScript
Domain	Retail
Duration	April 2018 till date
Client	McDonalds, USA.

Description:

Restaurant File Maintenance (RFM) is a centrally hosted web-based application that helps McDonald's to configure products, price, Key positioning assignments for the POS, presentation & production routing, promotion, user management, configuration, Package generation and Reports generation. RFM2 makes it easy to enter information that configures the POS device, accommodate all McDonald's restaurants and provide more reliable data.

Role and Responsibilities:

- I played the role of a Team member from offshore (Pune, India)
- Working mostly on creating, maintaining automation framework and automating test cases
- Developed automated test cases for angular application
- Set up complete automation environment on Capgemini Sprint-test Console. This includes setting up Selenium Grid hub and nodes
- Test script / Framework creation and maintenance
- Monitoring automated test execution on Console and evaluating test reports
- Schedule & conduct format code review, ensure review findings getting closed
- Contributed towards reusable functions in the project during automation script development
- Involved in identifying web elements and preparing web element repository
- Involved in feasibility analysis and effort estimation of test cases for automation
- Performed analysis of failed reports, if found any defects, logged in JIRA

Trainings

Capgemini Internal Industry Standard Automation training - 3 month
